

Sustainable and safe

Responsibility for the safety and health of customers and the protection of natural resources are part of our company policies and mission statement. Feintool is guided by the principles of sustainability – all of its products and manufacturing processes must meet stringent environmental, economic, and social standards and always be state of the art. This is why we continuously optimize processes and make them energy-efficient and environmentally friendly. Our objective is to manufacture safe products and do our part to create an environment worth living in. Feintool offers its own training courses for customers’ press operators who work on the resource-saving FB one.

Complaint management

Violations of applicable legal requirements and company policies such as the Code of Conduct are not tolerated. Managers are required to ensure that violations are identified, investigated, and rectified. They are responsible for reporting on these matters to the CFO of Feintool International Holding AG and to the companies’ compliance officers at regular intervals. The Executive Board monitors compliance.

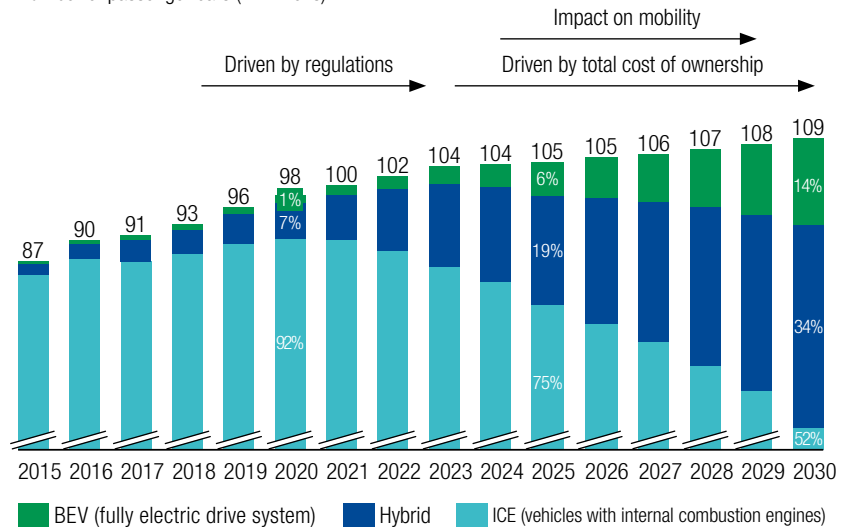

If violations occur, employees can contact an ombudsman, even anonymously. Misconduct can have an impact on the employee’s employment relationship and lead to claims for damages. Feintool investigates all violations of the rules.

Sharing expertise

Feintool develops exactly the right solutions for demanding industries and is synonymous with exceptional service quality. This also includes comprehensive knowledge sharing – the technology leader offers a basic and advanced training program along the entire process chain, making its customers’ teams experts in “fit production” and keeping them up to date on the latest developments. Experienced instructors share first-hand knowledge in training modules that can be selected according to trainees’ needs and requirements.

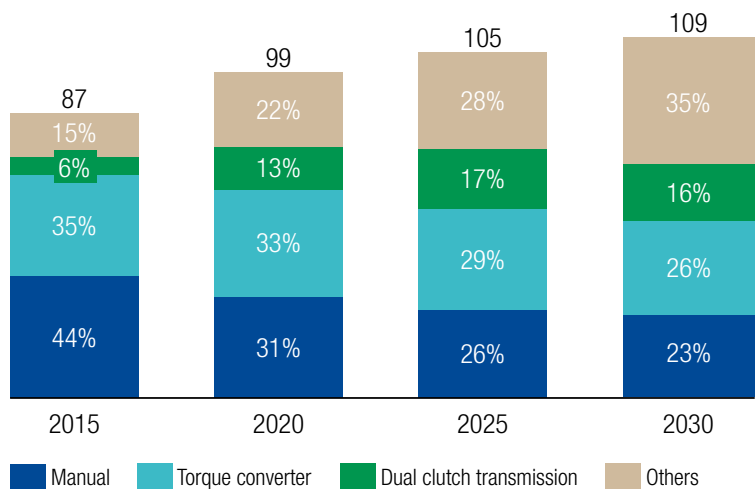

Change in automotive drive systems

Number of passenger cars (in millions)

Transformation of the transmission market

Number of passenger cars by transmission type (in percent and in millions)

The annual customer symposium organized by Feintool US Operations is also dedicated to sharing knowledge and exchanging ideas. In 2019, around 50 leading OEMs and automotive suppliers came together for the event in Cincinnati focused on “Navigating the Unknown.” As such, the event centered around the question of whether it is possible to increase productivity in an environment that is primarily shaped by pressure from international competition and disruptive technologies, but also by trade wars.
